

(creditor)watch

DevOps Engineer

Job Description

CreditorWatch – DevOps Engineer

About the Company:

CreditorWatch (the Company) is a prominent Australian credit reporting bureau that manages the credit files of over 55,000 commercial businesses in Australia. It is a subscription-based commercial company.

CreditorWatch has grown to be recognised as one of the country's most innovative customer-centric credit bureaus in Australia, dedicated to attracting and caring for the best in the business while acting with enduring passion for its customers, and with a reputation for meeting market expectations as we continue to deliver nurturing and solutions-based customer excellence.

At CreditorWatch, we are dedicated to providing employees with the premier professional training, equipment, mentoring and support to optimise the success of every individual who joins our business.

CreditorWatch has a reputation for employing people hold a 'can-do' attitude, and who will appreciate being part of an accountable, high-performance culture.

Your Impact to CreditorWatch:

The Engineering Team are passionate, dedicated and driven department looking for experienced and talented DevOps who can take the technology stack to the next level.

Your impact starts with the focus on reliability, scalability, automation and innovation. Managing all things infrastructure using Terraform you will be responsible for enabling the deployment of highly available and resilient infrastructure. Building the tools to manage and monitor our Service Level Objectives and Uptime, you will help build the foundations of automating the

deployment and rollback processes with data driving the decisions, because we release multiple times a day.

You are a good fit for us if you love solving infrastructure and environment problems before our customers even know about them. You know the only way to scale an engineering team is to automate the most complex problems and you use metrics behind all your decisions.

Responsibilities

- Design, build and operate large-scale, AWS cloud-native infrastructure solutions
- Designing, building and maintaining high-availability, fault-tolerant, scalable, distributed software in production.
- Possess strong skills in Linux administration.
- Possess a comprehensive understanding of event-driven architecture principles and applications.
- Demonstrate experience and understanding of microservices architecture principles and best practices.
- Display competence in setting up and managing metrics, dashboards, alarms, and monitoring systems.
- Showcase expertise in implementing Infrastructure as Code (IaC), with a specific focus on Terraform.
- Demonstrate strong capabilities in debugging and troubleshooting.
- Possess experience in working with Object-Oriented Programming languages.
- Demonstrate expertise in containers, including Docker, and container orchestrators such as ECS and EKS.
- Showcase proficiency in designing and managing CI/CD pipelines.

Competencies (Essential behaviour required for the role)

- Collaborating with stakeholders on complex projects.

- Passionate about continuous learning and experimenting with new technologies.
- Experience diagnosing and resolving problems in high-throughput web applications and network services.
- Ability to manage priorities and task scheduling with minimal direction.
- Strong written and verbal communication skills including the ability to write concisely for documentation, project specifications and business cases.
- Be motivated, passionate, and proud of your work. Taking initiative to drive projects forward and you have the ability to articulate ideas and think critically about how to execute them.

Your Qualifications

We are more interested in your previous experiences, what your technology stack and projects entailed and how this can translate into some of the exciting projects we have in plan at CreditorWatch.
